Okay, last thing I would say, senior staff wise....I can't tell how significant your interim findings are....below/above some action level....is this amount larger/smaller than expected...are we concerned...? etc

Probably by the end of this week/beginning of next. I was getting it done and then got pulled into re-evaluating an old dioxin site.

It's good. When could we say we might expect to finish and provide data? Estimate?

I just winged it. If this is totally wrong, just send me an example and I'll try again!

For Ed:

NDEE requested that Region 7 review sediment data collected from the stream and private pond located downstream of the AltEn facility. Easily accessible screening levels for pesticides in sediment are not available from OPP. However, sediment toxicity data can be found in the OPP risk assessments (for *some* of the site-related pesticides). We have compiled the available toxicity data and will provide the state with the results of a comparison to the sediment data collected downstream of the facility.
